FeneVision® Best Practice

Pricing-How to Activate Pricing Logs in FeneVision (BP0019)

Revision	Date	Description of Change	Revised By
A	09/26/2018	Reformatted	KED
B	06/29/2022	Additional Step for Adding Key Value in Registry Editor	MAM

Introduction

FeneVision® allows users the possibility to generate a text file with debug information about pricing calculation. This applies for both 'Order Entry' and 'Purchase Order Entry'.

Procedure

- A registry entry must be added to the PC on which Core will run for the test.
- Open 'Reg-Edit'.
- Add a new registry key called 'Pricing' in
 - HKEY_CURRENT_USER > Software > VB and VBA Programs > FTOrders
 - Right click on the "FtOrders" folder and select new key and update key value to 'Pricing'
- For order entry, under the 'Pricing' key, add a new string value called 'Math Path'.
- For purchase order entry, under the 'Pricing' key, add a new string value called 'Vendor Math Path'.
- The value of the string value is the complete path where the text file will be created.
 - It must include the text file name with the .txt extension.
 - The directory cannot be the root of c: or other system folders on the c: drive, because the software does not have permissions to write there.
- After enabling the pricing log, exit and re-enter Core. Enter a lineitem on your order or po. The pricing log only saves data for one lineitem at a time. If you enter a second lineitem, it overwrites the file.
