Hello Customer,

Welcome to the latest **FeneVision newsletter**. This newsletter is part of our on-going commitment to supporting our customers' success by sharing actionable advice to boost your business, the latest news on enhancements to FeneVision and early access to training and events.

We're here to help you thrive. Please share this newsletter within your organization.

## Product Updates

### Product Release Preview

The R&D team has been busy in Q1 and working at a great pace to deliver FeneVision CORE version 18.6.

With 300+ features added in 2024 for business growth, we've focused on performance tuning to benefit teams such as CSR, Purchasing, Production, and Shipping Logistics. These ongoing improvements reduce bottlenecks, streamline operations, and boost efficiency, driving productivity and growth. Performance tuning will never be done and below is a preview of exciting new features coming in v18.6:

1. **Shower door enclosures** can now be **processed as sub-line items**, rather than treating a shower door as a single item with sub-assemblies. Enclosures can be scheduled like windows within an opening, allowing separate scheduling of glass/IGUs and hardware packs, with individual start dates to support just-in-time manufacturing.
2. **Added template Dashboards for glass cutting optimization and tempering furnace optimization yields over time**. Give your teams clear, actionable insights into material usage trends over time. It helps identify inefficiencies, and spot opportunities for cost savings. This results in improved resource planning, lower costs, and streamlined operations, ultimately contributing to more efficient and sustainable production processes.
3. **SAGE Intact Integration** offers access to Sage's latest cloud hosted WEB API driven accounting package. This expands the existing list of Accounting Integrations allowing users to always have the freedom to select the best accounting solution between a variety of QuickBooks, SAGE, and Microsoft accounting products.

Did you miss FeneVision CORE's December release?

## Module of the Month

### CAPM

#### Do you have a Capacity Planning Module for on-time delivery but still use Excel to manage daily production utilization across multiple production lines?

Looking for ways to update Capacity Planning to proactively shift work between lines and machines?

With FeneVision's Capacity Planning and Management (CAPM) Module, users can achieve optimized daily utilization of labor and materials by gaining a **clear understanding of current production status**. This ensures that resources are allocated effectively, maintaining smooth operations. Real-time production insights **empower managers to quickly identify issues and make data-driven decisions**, ultimately improving output and efficiency.

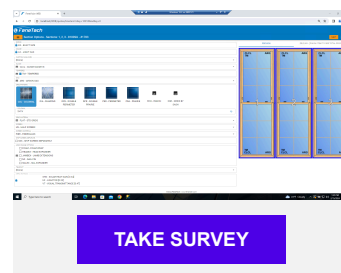

If you're lacking capacity planning, the Capacity Planning module can automate the calculation of customer-required dates, accounting for product lead times and production backlogs. It's specifically designed for Window and Door Manufacturers and Flat Glass Fabricators, making it an essential tool to streamline and optimize production planning.

## Customer Feedback

### FeneVision Web and FeneVision Web Connect Survey is closing soon, there is still time to complete!

As Cynclly and FeneVision continue to invest in innovation, we are seeking to leverage customer surveys to gather objective, quantitative, and qualitative feedback on our current product offerings and future roadmap. Our inaugural survey focuses on the eCommerce and In-home sales solutions. Whether or not you have used these services, we would greatly appreciate your insights. Your feedback will play a critical role in shaping the success of this new product.

## Did you know?

This month's focus is on Route Builder.

**Feature:** Ability to open multiple shipping routes at one time within **Route Builder**.

**Why:** Having multiple routes open at once allows users to easily move orders between routes. For example, if an order needs to be delayed, simply drag it from today's route to next week's, rather than reopening and re-finding the order at each step.

**How:**

- Within Route Maintenance, multi-select routes before clicking the open button or
- Already in Route Builder, right click in the left menu and select open or add route menu options.

**Versions Available:** 11.3+
