

FeneVision Release Notes

CORE Version: 18.06

Ability to indicate a part should be a sub line item within shower/storefront scripting 38007

Shower and Storefront parts now are able to be configured with sub-components as sub line items such as glass panels or extrusions. This allows sub-components to be scheduled and shipped separately.

Ability to support 4-Track mode for GED Saw Interface 45028

Users may now generate saw files for a GED 4-track saw with cuts from two different units.

Ability to add Shipping Exclusions to log reasons/comments items were not loaded onto a truck (unshipped items) 33150

Users are now able to log Shipping Exclusions as reasons items are not shipped with the truck and provide optional comments to provide additional clarity.

Ability to export European Union electronic invoices 42705

FeneVision now has the ability to export EU Electronic Invoices in the XRechnung XML format. Note: Additional changes may be required based on individual country regulations.

Ability to mark specific quote header fields as required 43765

WEB Quote fields can now be marked as required on a company level. Selected fields will be validated during quote entry to ensure users provide the required value(s).

Ability to choose the quantity of labels to print for multiple units in quantity mode 44422

Users can now specify how many labels to print in TRACKING when in Quantity Mode which can be helpful in high quantity manufacturing scenarios. This value can be defaulted to zero, one, or remaining quantity.

Additional Release Notes:

- Standardized the Thorwesten Saw interface to use our base Tooling Setup 44406
- Ability to sequence Work Routes by Secondary Ship To Name 44579
- Ability to monitor WEB server performance 45003
- Ability to warn TRACKING user when the scanned container definition does not match the preassigned container 15615
- Ability to generate V-groove DXF files directly from CORE 39938
- Added a user message to clarify when items can't be optimized on a Linear Saw Interface 42665
- Ability to interface with a cloud hosted Sage Intacct Web environment (via API) 42853
- Added new bar/line chart widget to show glass cutting optimization yields over time 43504
- Added new bar/line chart widget to show glass tempering optimization yields over time 43505
- Ability to view scheduled order line item Options and CAD operations as read-only even while locked by another user 43684
- Ability for Product Navigator to open showing the last used category for subsequent line items 43770
- Ability to determine whether to run a Tracking Action based on a custom stored procedure 44358
- Updated NFRC logo requirements for US and Canada in 2026 44525
- Ability to specify 'None' for the Invoice Type on Document Recipients for a customer 44554
- Ability to save and recall the reason a widget timed out 44607
- Ability to set an Order's Secondary Ship To via a custom order import 44718
- Ability to export inventory issues and replenishes to accounting 45066
- Updated 2024-2025 Energy Star Most Efficient Criteria for shipment reporting 45143
- Ability to map credit orders to an account different than sales revenue 45189
- Ability to Send Avalara Tax Category per FeneVision Part 45372
- Ability to add an Email Address to a Location's General, Financial, and Shipping contact info 45403
