

FeneVision Release Notes

CORE Version: 18.05

Ability to Relieve and Receive Purchased Parts as an EACH Qty 27343

This change provides the ability for a PO item that came from a BOM of an order to have a line item Height and Width on the PO and still be received and relieved as EACH instead of area. This removes a long-standing system gap that the inventory cost calculation on dimensional BOM parts that are purchased can get out of whack.

FeneVision Cyncly Icon Refresh 40050

FeneVision CORE icon and theming refresh.

Expand Alert Approval Functionality and add Description field for alerts 43588

Ability to BOM Cost % markup pricing on an option code level 43696

A new option price grid type is now available, 'By BOM Part % Markup'. The option price grid will allow the user to configure different price markups for different components of a BOM.

Ability in WEB ADMIN to set primary location for multi-location customers. 43749

This change lifts the restriction that customers assigned to multiple locations cannot use WEB. However, a customer like this will only be able to upload orders to their primary location from WEB.

Ability to Sync Tempering Recipes from Glass Setup to Opti 44215

Using this requires Opti 9.6 or later. Opti 9.6 provides the ability to combine multiple glass types together based on tempering recipe when optimizing tempering releases. This change allows for those recipes to be synced from CORE to Opti.

Ability to pre-sort units in Opti-Pack 44045

Additional Release Notes:

- Ability to quote different customers in WEB w/o View Quotes (Company) permission 42934
