

FeneVision Release Notes

CORE Version: 2026.2

Ability to create multiple transfer shipments on a sales order

45799

Users can add multiple transfer shipments to a sales order so products can move through more than one location before reaching the customer. The feature is enabled with the AllowMultiTransferShip GSP and does not support shipping to the same location more than once.

Ability to send configurable TCP/IP messages from Tracking Actions

48704

FeneVision adds a configurable TCP/IP Tracking Action that can send one or more messages to a specified host and port using a customer-defined stored procedure. This enables additional machine and system integrations without requiring a dedicated built-in action.

Ability to carry down Customer Price and Per Price by price detail

43457

Users can carry down Customer Price or Per Price overrides to matching price details in Order Entry and PO Entry. Matching uses the detail description, option or part, and base line-item part number, allowing targeted pricing changes without changing unrelated line items.

Ability to export multi-location transfer accounting transactions to Business Central

43804

Business Central now supports exporting FeneVision transfer-shipment accounting transactions to a Business Central general journal. The export creates journal lines from the transfer shipment GL summary, using configurable journal template and batch settings, and reports successful or failed exports in the accounting export workflow.

Ability to filter selected Management BI reports by Source Channel and Source Sub Channel

47971

Selected Management BI reports can now be filtered by Source Channel and Source Sub Channel. The filters default to {All} to preserve existing results, and selected values carry through supported report drill-downs.

Ability to use the FeneVision Activity Framework for background job status and notifications

48177

The FeneVision Activity Framework provides a common CORE experience for background job status and notifications. The initial 2026.2 workflows include Schedule Release and selected Order Entry background operations, such as Paste Special and save-related processing.

Additional Release Notes:

- Ability to export Business Central PO invoices as invoices or credit memos 48068
- Ability to configure the customer-hold message displayed in WEB 48073
- Ability to export individual component thickness values for stock-sheet LAMI through WinSLT 48183
- Ability to evaluate locked option questions during Smart Glazier imports 48613
- Ability to include Customer ID and Site ID in Business Central invoice export journal lines 48718
- Ability to copy a machine instance 40854
- Ability to sequence Opti-Pack harp racks by rack priority 44318
- Improved CAD error messages to identify non-existent parameters 45683
- Ability to send the FeneVision Location ID to Business Central on sales and purchase invoices 45883
- Ability to display packing notes in Route Builder and Route Maintenance grids 46831
- Ability to view and copy order and purchase order notes from maintenance lists 47191
- Ability to apply full shape adjustments to shaped openings in Opening Designer 47252
- Ability to use multiple layer mappings for Edgework in the Standard DXF Interface 47514
- Ability to generate Humam MES batch files at schedule release 47536
- Ability to retrieve Avalara tax for Forecast Orders from the tax screen 47733
- Ability to add or replace quantities for duplicate scans in Mobile Inventory cycle counts 47752
- Improved loading performance for Inventory Add Cycle Counts with large bin counts 47764
- Ability to track source channel and source subchannel for WEB and WEB CONNECT quotes 47766
- Improved Smart Glazier integration with per-line pricing through CORE CONNECT 47780
- Ability to apply option pricing to WinIG-generated purchase orders 47789

FeneVision Release Notes

• Ability to configure Domino Laser interfaces to wait for completion without blocking operators	47843
• Ability to print labels from FeneVision Mobile Tracking	47889
• Ability to filter the WEB Orders Dashboard by order type	47890
• Ability to alert administrators when scheduled SQL jobs run beyond a threshold	47923
• Ability to track Smart Glazier as the source channel for imported orders	47972
• Ability to track source channel and source subchannel for imported orders	47973
• Ability to track CORE as the source channel for manually created orders and quotes	47974
• Ability to export EU e-invoices with sender details by FeneVision location	48003
• Ability to export non-scoreable edges as cutouts through the CMS interface	48022
• Improved password update security in WEB and WEB Admin	48100
• Ability to generate Lisec GPS.PROD interface files at schedule release	48116
• Ability to identify containers assigned to the selected route in Trucking	48153
• Improved Option Wizard responsiveness when selecting options	48176
• Ability to run Paste Special in the background and receive an Activity notification	48178
• Ability to run Schedule Release in the background with Activity status	48181
• Improved Glass Setup save performance	48237
• Improved Capacity Schedules load time	48238
• Improved Container Setup load and close performance	48239
• Improved Lookup Table Setup performance and axis-value navigation	48240
• Ability to generate individual machine-interface files by SUMP at schedule release	48241
• Improved Capacity Requirements movement performance	48299
• Improved Option Wizard scrolling to the active field	48301
• Ability to filter items in Location Assignments	48302
• Ability to generate Flex Screen files using the new machine interface file format	48308
• Improved Schedule Release performance for large schedules	48310
• Ability to view BI sales reports by source channel	48327
• Ability to use the schedule release date in GED WinIG Remote Passthrough file names	48331
• Ability to generate WinIG Remote Passthrough files by work route	48344
• Improved Schedule Release performance for preassigned containers	48454
• Improved FeneVision Agent performance for reject jobs	48463
• Improved load time for the Inventory Quantity on Purchase Order Detail report	48503
• Ability to run multiple Order Recalculator Agent jobs in parallel	48522
• Ability to make purchase orders read-only after approval	48576
• Ability to generate Line Scanner LSC files at schedule release	48578
• Ability to export custom dimensions to Business Central	48600
• Ability to route Business Central integrations by FeneVision location	48601
• Ability to synchronize purchase orders, receipts, and purchase order invoices with Business Central	48602
• Improved Report Setup part selection with filtering, bulk selection, and sorting	48644
• Ability to store Smart Glazier package identifiers in a user-defined field	48658
• Ability to view background job statuses in the CORE Shell	48680
• Ability to map salesperson information to Business Central sales invoices	48736
• Renamed Project Total field to Estimated Project Total	47422
• Improved Capacity Planning calendar usability	48118
• Ability to draw Prairie grids on trapezoid and pentagon display objects	48249
• Ability to include build to stock orders in the Qty Remaining calculation	47369
• Ability to exclude vendor email from Business Central exports	48165
